DILLINGHAM POPULAR FOLDING CHAIRS

The Strongest, Most Comfortable Light Weight Folding Chairs Ever Made

It has taken more than thirty-five years experience, the development of a great deal of special machinery and all the manufacturing resources of this 67 year old concern to bring the Dillingham folding chair up to its present high state of development.

Comfort, beauty and strength are built into them so that today they are the acknowledged leaders wherever comfortable, light weight, durable chairs are used or sold.

Massive steam presses, built especially for this one task, bend the back posts of birch. There is no breakage; no impairment of the perfectly shaped and finished legs. Any one of the chairs will hold the weight of two 200 pound men—and there is nothing to get out of order or to weaken as the chair undergoes usage.

Seats are curved to fit the body. So is the back. The chair is as comfortable as any ordinary chair—more comfortable, in fact, for the purposes for which it is used. The patented construction makes the pinching of ones fingers impossible. Dillingham folding chairs are light in weight too and easy to handle and pack.

Particular attention has been paid to their appearance. Finished regularly in Natural, Fumed, Antique Grey or Mahogany, they harmonize perfectly with the regular furnishings of the home.

PATENTED JUNE 14, 1922
