OFFICE AND LIBRARY CHAIRS.
We would call your special attention to the

PHOENIX PERFECT CLAMP,

(Patented February 20, 1883.)

represented in the above cut, for securing the ends of the bow to the chair seat. The simplicity and efficiency of this device are so apparent as to commend it at once to the trade, as it entirely obviates the liability of the bow to become loose in the socket, prevents the seat from splitting, and strengthens the chair at its weakest point.

Having secured the sole and exclusive right to use this important invention, it will be placed on all our office chairs without extra charge.
