

Table of Contents

Abstract.....	2
Table of Contents.....	4
Introduction.....	5
Virus contamination of groundwater	5
Previous virus sampling in the Madison area	5
Project objectives and scope	8
Acknowledgments.....	8
Procedures and Methods.....	9
Selection of wells for sampling.....	9
Sampling procedure at municipal wells.....	12
Sampling procedure at lakes	13
Sewage influent sampling.....	13
Virus analyses and sequencing	13
Isotopic and geochemical sampling and analysis	14
Results.....	15
Precipitation, climate, and water levels during the study period	15
Viruses	18
Well-by-well virus results.....	20
Virus speciation and Infectivity.....	21
Groundwater and lake water chemistry	23
Environmental Isotopes in virus study wells	23
Discussion.....	28
Significance of virus detections.....	28
Potential virus pathways to wells.....	28
Lakes as a source of viruses.....	28
Sanitary sewers as a source of groundwater contamination	28
Relationships between sewer leakage and the hydrogeologic setting	29
Calculated source volumes of viral contaminants	30
Conclusions and Recommendations	33
Conclusions.....	33
Recommendations.....	34
References.....	35
Appendices.....	37
Appendix A: Virus results.	37
Appendix B: Geochemical results.	40
Appendix C: Field measurements.....	46
