

Table of Contents

Introduction.....	1
Background.....	1
Previous work.....	2
Purpose and scope.....	2
Hydrogeologic setting and well construction for field experiments.....	3
Site geochemistry.....	3
Procedures and Methods.....	4
Laboratory studies of strongly oxidizing conditions.....	4
Field study of in situ disinfection.....	5
<i>Well treatments</i>	5
<i>Field and laboratory procedures</i>	6
Results and Discussion.....	7
Laboratory studies of strongly oxidizing conditions.....	7
Field study of in situ disinfection.....	9
Microbiological populations.....	10
Conclusions and Recommendations.....	12
References.....	14
Appendix 1: Probe Data.....	30

List of Tables

Table 1. Unreacted pyrite chemistry from SH thin section.....	25
Table 2. Reacted pyrite chemistry from SH thin section.....	25
Table 3. Water quality results.....	25
Table 4. Additional water quality results.....	26
Table 5. Organic carbon and major ions.....	27
Table 6. Additional trace metal results.....	28
Table 7. Results of low-level analysis for ammonia and nitrate.....	29

List of Figures

Figure 1. Location of field site and arsenic concentrations in near-by wells.....	16
Figure 2. Field experimental design and sample collection schedule.....	16
Figure 3. Pre-reacted thin section of Skunk Hill Quarry material.....	17
Figure 4. Post-reacted thin section of Skunk Hill Quarry material.....	18
Figure 5. Sulfate concentrations in solution after 24 hour exposure to LM sample.....	19
Figure 6. Arsenic concentrations in solution after 24 hour exposure to LM sample.....	19
Figure 7. Arsenic and iron in solution after 24 hour exposure to LM sample.....	20
Figure 8. Water chemistry in test well.....	21
Figure 9. ORP and pH of borehole water during stagnant phases.....	22
Figure 10. ORP and pH of well water during control pumping phase.....	22
Figure 11. ORP and DO and pH in well water at time of chlorination.....	23
Figure 12. ORP in well water during chlorination and subsequent routine pumping.....	23
Figure 13. Microbial community analysis using culture-dependent method.....	24
Figure 14. Composition of clone libraries from culture-independent method.....	24
