

Attend the Winter Course

WISCONSIN has been a leader in meeting the problems of agriculture in production and manufacturing of dairy products.

The Short Course in Agriculture was established in 1885 and since that time it has been an important factor in the agricultural development of the state. Among its graduates are many of Wisconsin's most successful farmers. The men trained in the Dairy Course for butter making, cheese making and city milk supply have done their part to make Wisconsin a dairy state. Men of both courses recognize today the value of a course giving technical knowledge, a broadened vision of agriculture and an inspiration for the future. They are boosters for these courses. Other winter courses such as the Tractor course, and Nursery Salesman's course, have been given. This circular also describes courses for cow-testers, herdsman, seedsman, farm business, farm engineering and poultry.

Equipment Modern

The equipment of the College of Agriculture is thoroughly modern and practical. The farm buildings stand for the best types of farm architecture and the ideas represented in their construction can be adopted readily to the average farm. For years attention has been given to obtaining breeds of livestock that will be representative and true to type. The instruction in the Winter Courses is given by the regular members of the staff of the university, and the students have every advantage offered to the students in the other courses.

Purpose of the Courses

The primary purpose of the Winter Courses is to train young men for the business of farming and its special jobs. That it has and is accomplishing this purpose is definitely proven in the fact that probably 95 per cent of the graduates
